

Bright TV TV Viewership Analysis Dashboard

Channel performance · viewer behaviour · peak viewing times · audience segments

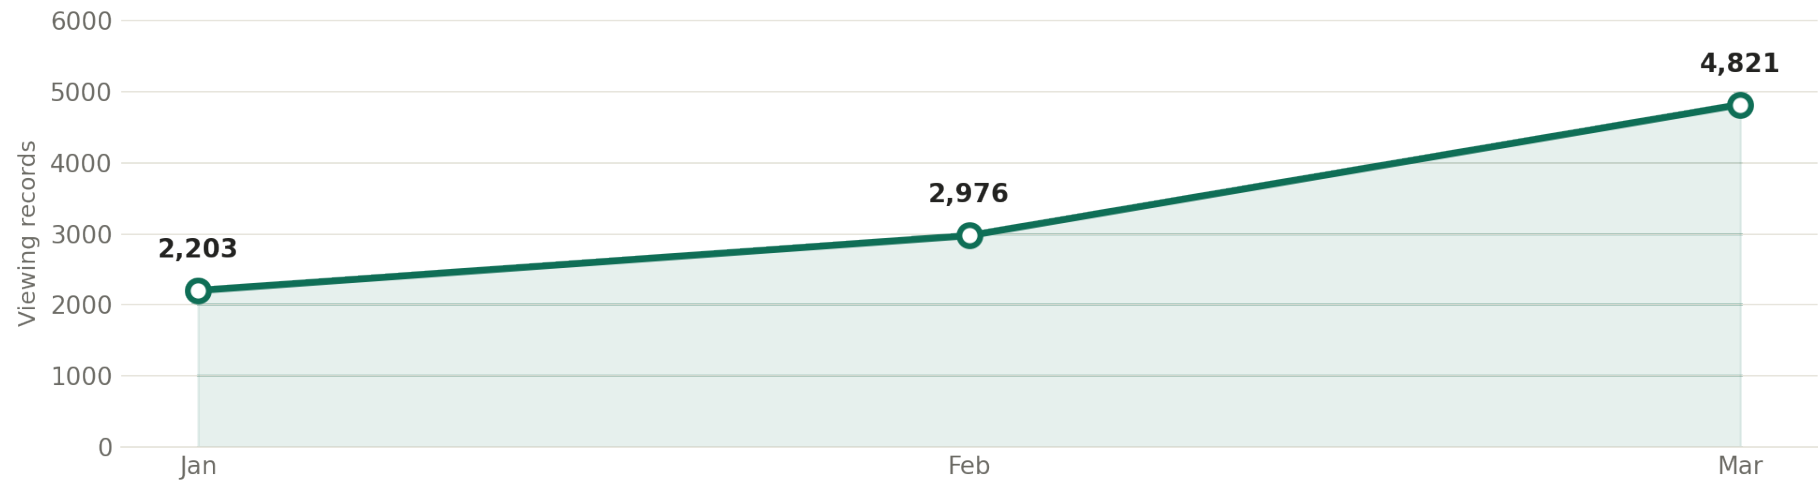

Data period: January – March 2016 · 10,000 viewing records · 18 TV channels

Dashboard overview

A high-level snapshot of total viewership volume, engagement, and monthly momentum.

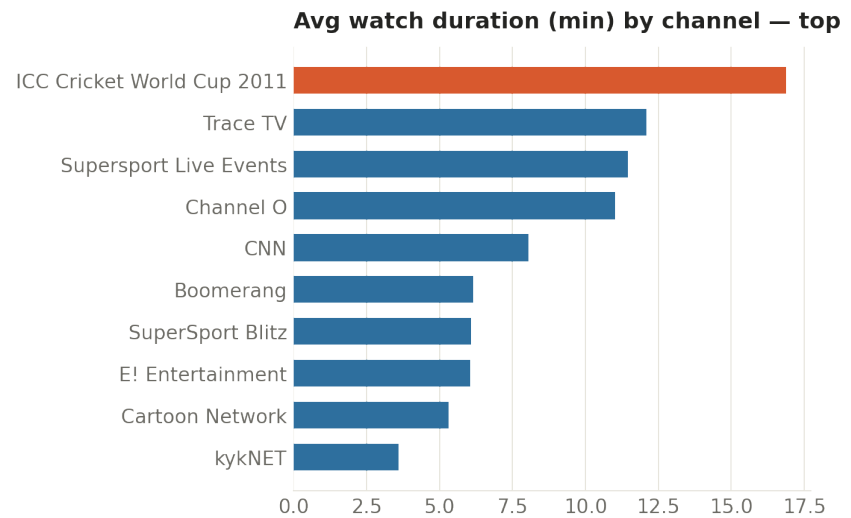

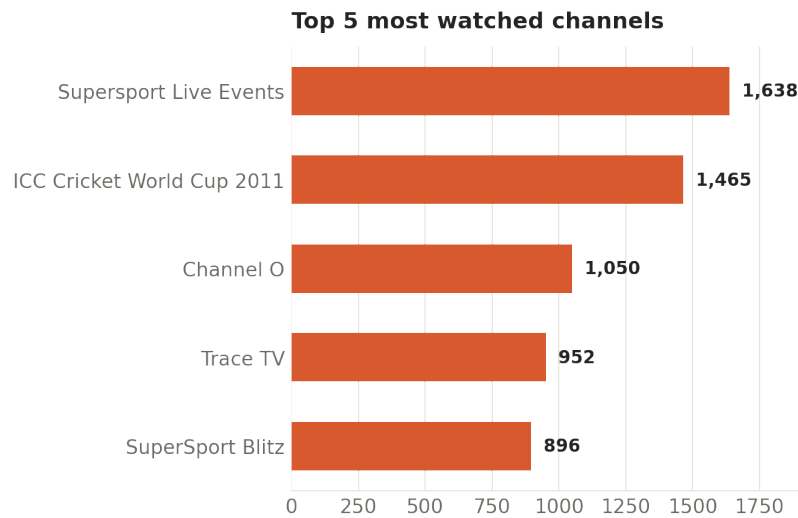

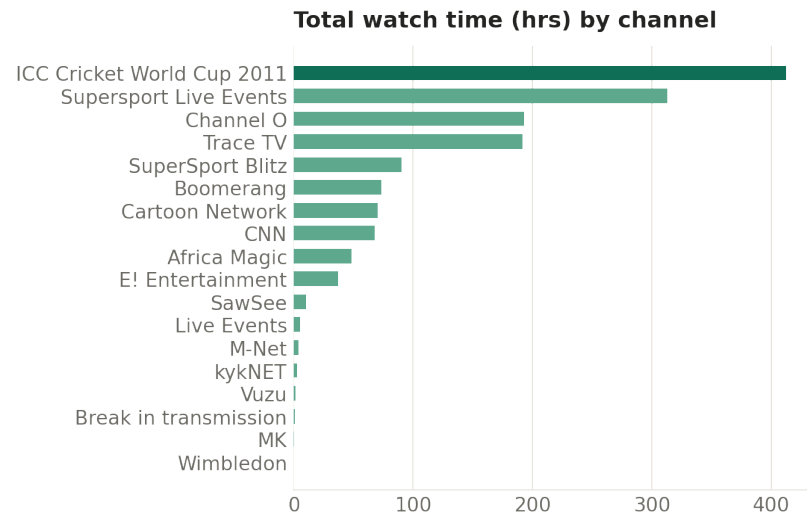

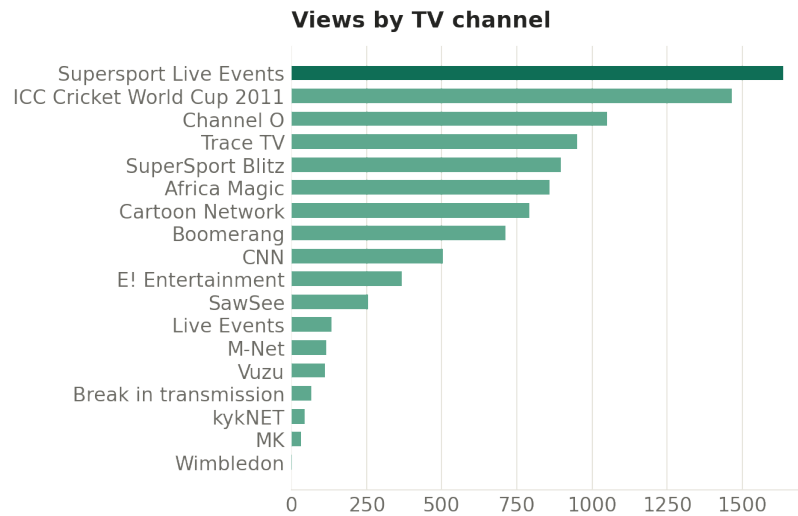

Viewership trend by month

Channel performance

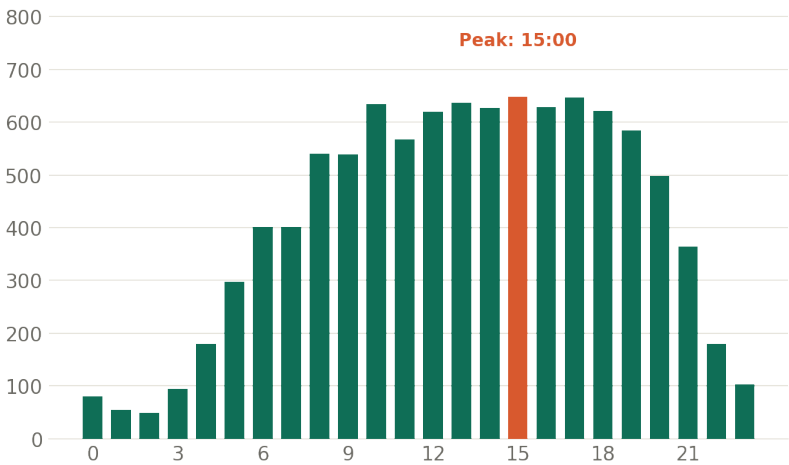

Which channels draw the most viewers and hold attention the longest.

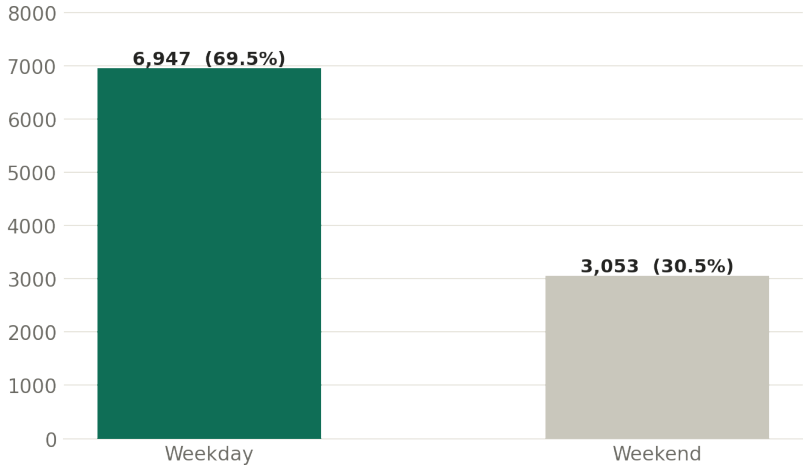

Viewer behaviour

When people watch: hourly patterns, weekday vs weekend, and peak time windows.

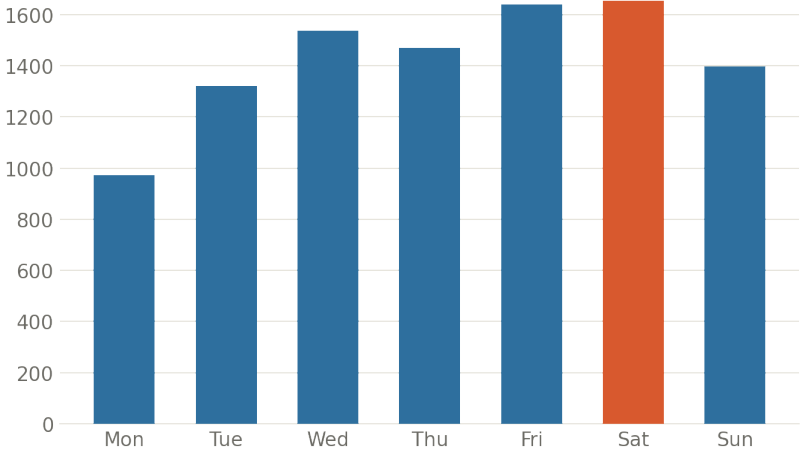

Viewership by hour of day

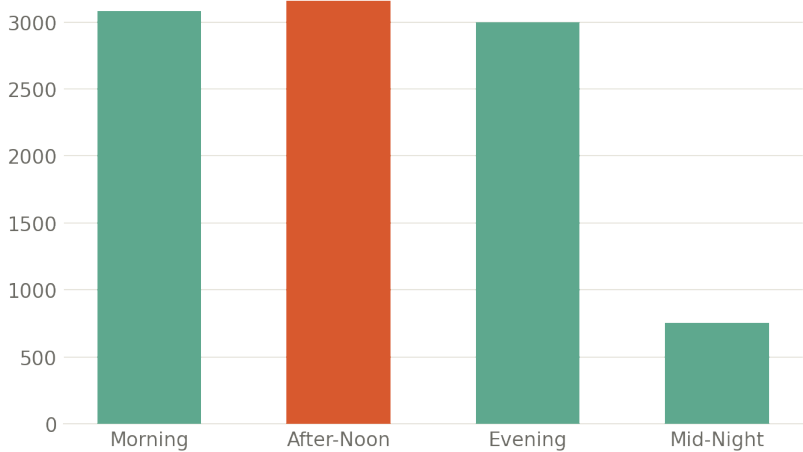

Weekday vs weekend viewership

Viewership by day of week

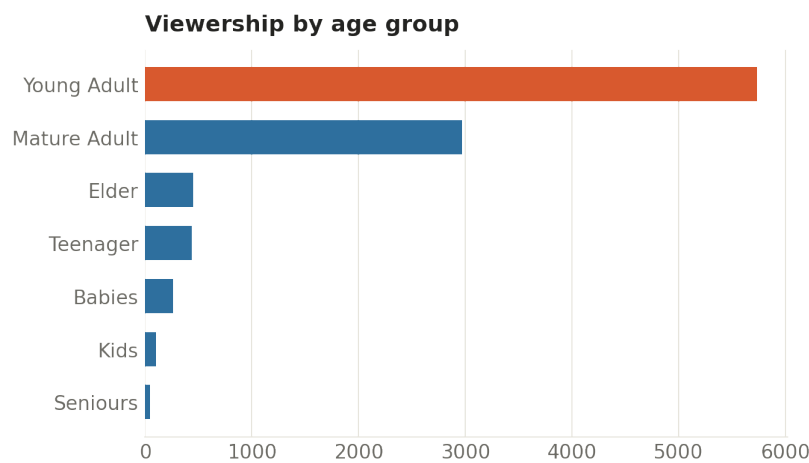

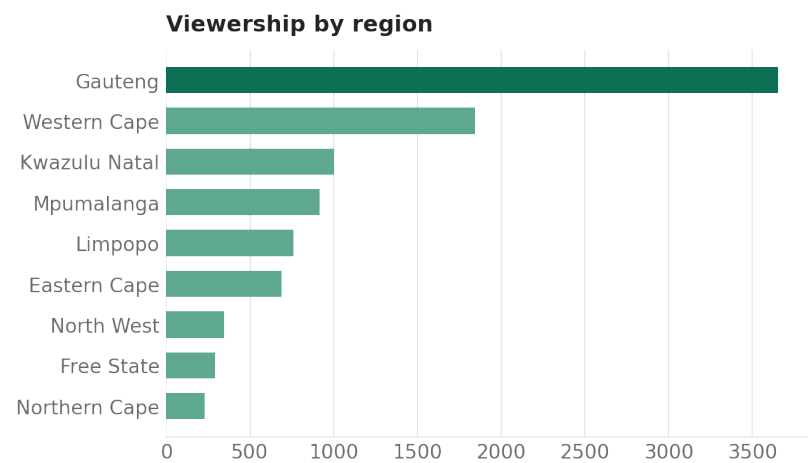

Peak viewing time analysis

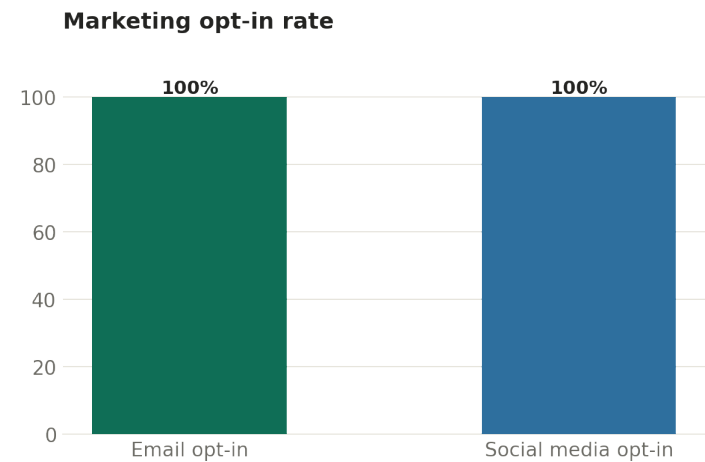

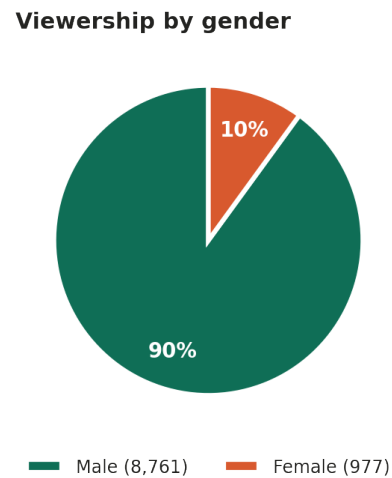

Audience segments

Who is watching, by region, age group, gender, and marketing opt-in status. • 'Uncategorized' region and 'Unknown' gender excluded.

Note: uniform across all records in this dataset

Insights & recommendations

Key findings from the dashboard, and where to focus effort next.

KEY FINDINGS

- Viewing volume held steady across Jan–Mar 2016, with no single month standing out — the sample spans a short, consistent three-month window.
- **Supersport Live Events** and the **ICC Cricket World Cup 2011** broadcast together account for roughly 31% of all viewing records — sport dominates the channel mix.
- Viewing peaks in the **afternoon** (hour 15 is the single busiest hour), with mornings a close second and a sharp drop-off after midnight.
- **Weekday** viewing (6,947 records, 69.5%) outweighs weekend viewing (3,053 records, 30.5%) by more than 2:1, and **Saturday** is the single busiest individual day.
- **Gauteng** is the leading region by volume, and the **Young Adult** segment watches the most overall.
- The recorded audience skews heavily male (about 90% vs 10% female) — worth validating against the source data, since this is a wide split.
- Email and social media opt-in flags are set to "yes" for every record, so they don't currently differentiate viewers — flag this with the data owner before using them for targeting.

RECOMMENDATIONS

- **Best time to promote content:** weekday afternoons capture the largest live audience; use evenings as a secondary window rather than mornings.
- **Best channels to focus on:** Supersport Live Events and cricket coverage are the strongest draws — prioritise sponsorship and cross-promotion around live sport.
- **Best audience to target:** Young Adults in Gauteng are the largest reachable segment; tailor promotional content and timing to this group first.
- **Weekend opportunity:** weekend viewing is notably lower than weekday viewing — investigate whether this reflects genuine behaviour or a programming gap, since it's a potential growth area.
- **Data quality:** before using region, gender, or opt-in flags for segmentation decisions, clean up the "Uncategorized"/"Unknown" values and confirm why email/social flags are uniformly set to yes.
